

# Operational Support Plan

**Document:** Operational Support Plan **Service Provider:** AL MERAK TAX CONSULTANT L.L.C (E-Numerak)  
**Date:** 2026-06-23

Fill the **[PLACEHOLDER]** contact details and support hours before submission.

## 1. Support channels

| Channel          | Detail                                                                       |
|------------------|------------------------------------------------------------------------------|
| Support email    | <b>[PLACEHOLDER — e.g. support@e-numerak.com]</b>                            |
| Phone / WhatsApp | <b>[PLACEHOLDER]</b>                                                         |
| In-app help      | Chat widget + contact form                                                   |
| Support hours    | <b>[PLACEHOLDER — e.g. Sun–Thu, 09:00–18:00 GST; emergency on-call 24/7]</b> |

## 2. Support tiers & response targets

| Severity             | Definition                                          | Response                     | Resolution target             |
|----------------------|-----------------------------------------------------|------------------------------|-------------------------------|
| <b>P1 — Critical</b> | Platform down / cannot send or receive invoices     | <b>[e.g. 1 hour]</b>         | <b>[e.g. 4 hours]</b>         |
| <b>P2 — High</b>     | Major feature impaired (e.g. TDD reporting failing) | <b>[e.g. 4 hours]</b>        | <b>[e.g. 1 business day]</b>  |
| <b>P3 — Normal</b>   | Minor issue / question                              | <b>[e.g. 1 business day]</b> | <b>[e.g. 3 business days]</b> |

## 3. Monitoring & alerting (in place)

- **Netdata** — real-time CPU/RAM/disk/container metrics.
- **Health/readiness probes** — `/health/` and `/ready/` for availability.
- **Certificate expiry monitoring** — automated alerts before AP/SMP cert expiry.
- **fail2ban** — automated intrusion alerts/bans.
- **ClamAV** — weekly malware scan with alerting on detection.
- **Logging** — application + AS4 exchange logging for traceability.

## 4. Incident management

1. **Detect** — monitoring alert or user report.
2. **Triage** — assign severity (P1–P3) and owner.

3. **Mitigate/Resolve** — apply fix; for P1, restore service first (see DR plan).
4. **Communicate** — update affected users on status and ETA.
5. **Post-incident review** — root-cause analysis for P1/P2; preventive actions.

## 5. Maintenance

---

- **Patching:** OS + dependency security updates applied regularly.
- **Deployments:** containerised, documented deploy workflow; changes version-controlled in Git.
- **Planned maintenance:** communicated in advance; scheduled in low-traffic windows where possible.

## 6. Escalation

---

| Level                             | Contact                     |
|-----------------------------------|-----------------------------|
| L1 — First response               | [PLACEHOLDER — name / role] |
| L2 — Technical lead               | [PLACEHOLDER]               |
| L3 — Vendor / PEPPOL Service Desk | servicedesk@peppol.eu       |

---

**Confirmation:** We operate and support the E-Numerak platform as described. *(Sign + date on submission.)*
